| ◆                   | Hacking Alerts & Logging    |
| ◆                   | Phishing Threat Protection  |

## Downtime Is Unacceptable

When your network is down, your costs go up. You pay employees for minimal or no productivity, you lose time, you lose sales and have to pay to have the issues resolved at the same time! Even worse is the potential for data loss, hackers accessing sensitive data, or a ransomware attack. Security Management is designed to proactively monitor, manage, and secure your network environment. Proactively protecting your users and network from malicious and inappropriate content on the web will ensure a safe workplace for everyone. Call today to setup your network security assessment.
